

## Programs

1. Create a class called Student containing student ID and Student name. Create a default constructor with a default value ID as 122 and name as "STCET student" . Also show if the programmer is not creating any constructor then what is the output.
2. Create a parameterized constructor of class Employee having EID, Ename, Dept ( Sales, IT, accounts, HR). Display the record of five employees having all the mentioned characteristics.
3. Implement the details of five students with the attributes mentioned in question1 using an array of objects.

## Questionnaire

1. What is a constructor? Why is it called so?
2. What happens if a programmer does not create any constructor?
3. If we create 5 objects of a class, then how many time constructors will be called?
